## Product Photos

Analog input/output module used for testing the integrated AD/DA function of MCUs

## Overview

The **Analog Test Board** is an accessory board includes an onboard Audio Power Amplifier LM386M, and two high-precision adjustable resistor used for adjusting input voltage level (0-3.3V, 2 channel), and a speaker for indicating the output voltage level by sound volume (1 channel).

The board is ideal for testing AD/DA function that integrated in the MCUs, it also supports MP3 output, music playing, etc.

## Features

LM386M, speaker, high-precision adjustable resistor  $\times 2$ , analog input/output
