BOARD ISP

AVR ISP Programming Board Shield ATMEGA8 ATMEGA328P ATTINY2313 ATMEGA32

ATMEL AVR ISP Programming Board Shield

This board has been developed specially for most popular AVR microcontrollers, for ISP programming.

DIP28 microcontrollers: ATMEGA8, ATMEGA88, ATMEGA168, ATMEGA328P

DIP40 microcontroller: ATMEGA16, ATMEGA32

DIP20 microcontroller: ATINY2313

Crystal oscillator for microcontrollers - 16.000 MHz

Please note - board will come without microcontrollers!
